Federal Voting Assistance Program
Comparative Risk Analysis of the Current UOCAVA Voting System and an Electronic Alternative Report
Risk Analysis Questionnaire for an Electronic Voting System

THREAT VECTORS	LIKELIHOOD			IMPACT		
VOTING SCENARIO: Electronic absentee voting system with __balloting via Web interface__, __transmission via the Internet__, and __automated tabulation__	In the context of a Federal election, what percentage of the time do you think the threat would be most likely realized AND have an observable effect? Provide minimum and maximum values. Interpret this range of values as "I think this threat would be realized AND have an observeable effect in [most likely] percent (%) of the time but this estimate could be as low as [minimum] % and as high as [maximum] %." (numbers DO NOT need to sum to 100)			In the context of a Federal election, assuming the threat is realized, what percentage of the time would it have a low, medium, and high impact? (numbers should sum to 100)		
Completed by: Cyber Security Expert 2. Data extracted.						
Voting Step: REGISTRATION	Minimum	Most Likely	Maximum	Low	Medium	High
ATTACKS						
INSIDER ATTACKS						
Attacks Against VRDB				90	5	5
Types of threat vectors: Intentional modification of registration records; Intentional destruction of registration records; Intentional addition of fake registration records; VRDB intentional crash;						
Attacks to Voter's Assistance				90	5	5
Types of threat vectors: Intentional corruption by malicious insiders of information provided to voters (omission, false or incomplete statement, outdated information);						
Attacks to Voting Access				80	10	5
Types of threat vectors: Intentional failure at LEO to send or misaddress registration form and instructions; Intentional failure at LEO to send or misaddress registration rejections; Intentional addition of confusing language on registration form and instructions; Intentional failure to provide login credentials and instructions to voters; Intentional corruption of login credentials and instructions provided to voters; Intentional addition of confusing information on voting interface;						
Attacks by Denial of Service				80	10	5
Types of threat vectors: Intentional disruption of registration activities at LEO; Intentional disruption of transmission of registration materials; Intentional disruption of voter's ability to register;						
Attacks Against Registration Forms and Instructions				90	5	5
Types of threat vectors: Intentional modification at LEO of registration forms and instructions; Intentional destruction at LEO of registration forms and instructions; Intentional addition at LEO of fake registration forms and instructions;						

THREAT VECTORS	LIKELIHOOD			IMPACT

THREAT VECTORS	LIKELIHOOD			IMPACT		
VOTING SCENARIO: Electronic absentee voting system with <u>balloting via Web interface</u>, <u>transmission via the Internet</u>, and <u>automated tabulation</u> **Completed by: Cyber Security Expert 2. Data extracted.**	In the context of a Federal election, what percentage of the time do you think the threat would be most likely realized AND have an observable effect? Provide minimum and maximum values. Interpret this range of values as "I think this threat would be realized AND have an observeable effect in [most likely] percent (%) of the time but this estimate could be as low as [minimum] % and as high as [maximum] %." (numbers DO NOT need to sum to 100)			In the context of a Federal election, assuming the threat is realized, what percentage of the time would it have a low, medium, and high impact? (numbers should sum to 100)		
Voting Step: MARKED BALLOT RETURN	Minimum	Most Likely	Maximum	Low	Medium	High
ACCIDENTAL DISRUPTIONS						
Disruptions by Natural Events				98	1	1
Types of threat vectors: Weather-related; Earthquake; Outbreak;						
Disruptions by Environmental Events				98	1	1
Types of threat vectors: Fire; Spill; Flooding;						
Disruptions by Human-Created Collateral Events				98	1	1
Types of threat vectors: Technical failure; Labor-related; Terrorism;

THREAT VECTORS **VOTING SCENARIO:** Electronic absentee voting system with <u>balloting via Web interface</u>, <u>transmission via the Internet</u>, and <u>automated tabulation</u> Completed by: Cyber Security Expert 2. Data extracted.	LIKELIHOOD In the context of a Federal election, what percentage of the time do you think the threat would be most likely realized AND have an observable effect? Provide minimum and maximum values. Interpret this range of values as "I think this threat would be realized AND have an observeable effect in [most likely] percent (%) of the time but this estimate could be as low as [minimum] % and as high as [maximum] %." (numbers DO NOT need to sum to 100)			IMPACT In the context of a Federal election, assuming the threat is realized, what percentage of the time would it have a low, medium, and high impact? (numbers should sum to 100)		
Voting Step: RETURNED BALLOT PROCESSING & TABULATION	Minimum	Most Likely	Maximum	Low	Medium	High
ATTACKS						
INSIDER ATTACKS						
Attacks Against VRDB				98	1	1
Types of threat vectors: Intentional modification of registration records; Intentional destruction of registration records; Intentional addition of fake registration records; VRDB intentional crash;						
Attacks by Denial of Service				98	1	1
Types of threat vectors: Intentional disruption of processing of marked ballots at LEO;						
Attacks Against Processing of Returned Ballots				98	1	1
Types of threat vectors: Intentional modification of marked ballot packets at the LEO; Intentional destruction of marked ballot packets at the LEO; Intentional addition of fake marked ballot packets at the LEO; Intentional loss of marked ballot packets at the LEO;						
Attacks Against Tabulation				98	1	1
Types of threat vectors: Intentional subversion of the counting process; Intentional subversion of the validation process; Intentional subversion of the tabulated results;						
Attacks Against Adjudication				98	1	1
Types of threat vectors: Intentional refusal of legitimate ballots; Intentional acceptance of invalid ballots; Intentional misapplication of rules for determining voter's intent;						
OUTSIDER ATTACKS						
Attacks by Denial of Service				98	1	1
Types of threat vectors: Intentional disruption of marked ballot processing and tabulation activities at LEO;
